

Observation

Customer Intelligence at Madhar Sha

Chennai · Weekly report

The figures in this report are a demonstration. They are not measurements of this showroom. They come from the analysis running against a test data set while the cameras are being connected. The structure, the wording and the calculations are real; the numbers are not.

Reporting period : 21 – 27 July 2026 (7 days)

Prepared for : Madhar Sha Textiles — Showroom, Chennai

Prepared by : Mr. Srinivason U, Principal Consultant — Strategy, Connecting Dots Strategic Consulting.

Method : Continuous anonymous video analysis of every hour the showroom was open, reported against the CDSC retail framework.

Reference : CAM - 20260727

How to read this report

Every term used in the pages that follow

The cameras count what people do, not what they think. Each term below has one precise meaning, and a figure read as something close to it is worse than no figure at all. This page sets out what each term counts, and what it does not mean.

Term	What it counts	What it does not mean
Customer entry	Each time a person crosses the entrance line into the showroom.	It is not a count of different people. A customer who steps out and comes back is counted twice.
Visit to a section	Each time a customer enters a section and stops at a display.	It does not mean a purchase was made, or that the customer was served.
Walk-through	Each time a customer enters a section and leaves it without stopping.	It does not mean the customer disliked the section. More often it means they did not notice it.
Typical visit length	The middle value of every visit to a section: half the visits were shorter and half were longer.	It is not an average. One customer who stays an hour does not move it.
Minutes without a staff member	Minutes when customers were in a section and no staff member was close enough to help them.	Time when the section was empty is not counted. An empty section is not a coverage failure.
Time before approach	The time between a customer stopping in a section and a staff member coming within reach of them.	It does not measure whether the customer was helped, only that somebody came close enough to help.
Queue length	The number of customers waiting at the billing counter at one moment.	It counts customers waiting, not customers being served.
% of all customers	The share of everyone who entered the showroom who stopped in that section at least once.	A customer is counted in every section they stop in, so this column does not add up to 100%.
Busiest hour	The hour of the day with the most arrivals, added up across the whole reporting period.	It is not the busiest hour of one particular day.
Not assessed	A question the cameras cannot answer, such as product knowledge or cleanliness.	It is not a low score. It carries no score in either direction, and it is left for an inspector to assess in person.

The four results

Every question in this report is answered with one of these words, or with a figure

Result	What it means
Good	The figure meets the standard. No action is required.
Need improvement	The figure is below the standard but is not urgent. It should be addressed in the normal course of business.
Bad	The figure is well below the standard and needs attention now.
Not assessed	The cameras cannot answer this question. It is left for an inspector to assess in person.

Every result is printed beside the figure it was calculated from. Where a result and a figure appear to disagree, the figure is the authority. Nothing in this report is a score out of ten or an index: every number is a count of people, a length of time or a share of one of those.

Introduction

Connecting Dots Strategic Consulting

“Customer is the King. To cultivate this Service Culture, we should focus People Development, who will take care of our Customers and enable Profitability.”

— K U Srinivason, CDSC

Our mission is to help organisations achieve a higher market share, increased revenue and a better customer experience, through customer service strategy and organisation development. We have helped our clients design customer service frameworks, prepare process notes and standard operating procedures, build customer engagement and develop employee skills.

What this report adds

A mystery audit is one visit, by one person, on one day. This report applies the same framework to every hour the showroom was open, using the cameras already installed. It does not replace the audit: the cameras cannot assess product knowledge, grooming, ambience or cleanliness, and this report does not claim they can. It answers the questions the cameras can answer, continuously, between visits.

What this report answers

When do customers come?

Arrivals are counted at the entrance, hour by hour and day by day. Across this period the busiest hour was 19:00.

Where do they go, and where do they stop?

Each section is measured for visits, stops, walk-throughs and typical visit length, so a section customers avoid can be told apart from one they simply never reach.

Were they served?

The time a customer waits before a staff member approaches, and the minutes a section held customers with no staff member present.

What should the floor do differently?

Every observation is paired with a recommendation and the role responsible for it.

No individual is identified anywhere in this report. No faces are stored, nobody is named, and nobody is recognised from one visit to the next.

Core

Target against achievement, by domain

Domain	Weight (target)	Assessed	Achievement	Remaining
Customer Experience	50%	3 of 11 items	67%	8 items need an inspector
Infrastructure	10%	0 of 4 items	—	4 items need an inspector
Visual Merchandiser	30%	0 of 8 items	—	8 items need an inspector
Training & Development	10%	0 of 4 items	—	4 items need an inspector

67%

is the score across the **15% of the framework this report was able to assess**. It is not a mystery audit score and should not be compared with one. At most 22% of the framework can ever be measured by camera. The remaining 78% — product display, pricing, ambience, cleanliness, selling skill and product knowledge — needs a person on the floor.

What continuous measurement adds

The reverse is worth stating. Arrivals by hour, the busiest moment of the week, section by section stop rates, minutes without a staff member and the length of the billing queue score nothing at all in the framework above, because a single visit cannot measure them. They are the strongest figures in this report and they are entirely additional to the audit.

Concern on Domain

21 – 27 July 2026

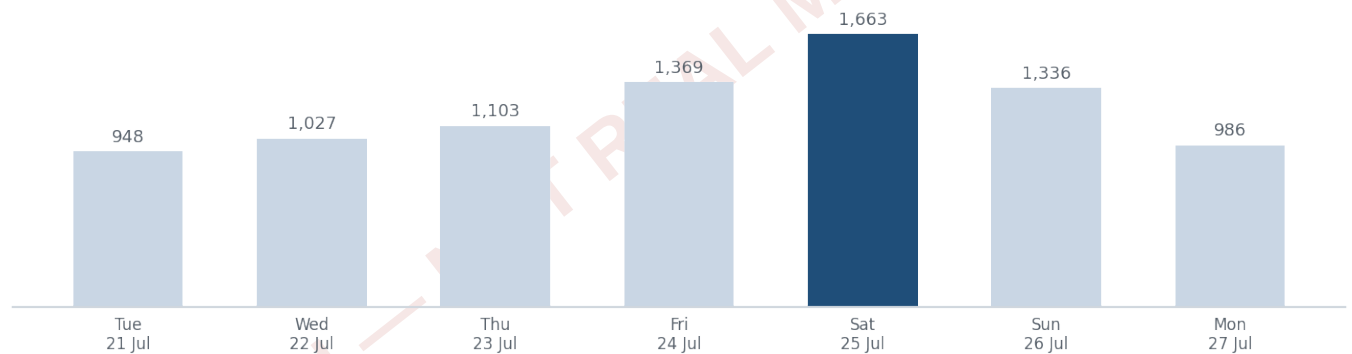

Domain	Concern
Service Coverage	Trials was without a staff member for 4 hours 30 minutes while customers were in the section.
Welcome and Greeting	Customers waited 34 seconds in Kids before a staff member approached them.
Staffing to Demand	The floor was short of staff for an average of 13 half-hour periods a day.
Layout and Placement	Only 24% of customers reached the Kids section.
Billing Process	The billing queue reached 33 customers at 19:30 on 25 Jul.

Trading Pattern

21 – 27 July 2026 · 7 trading days

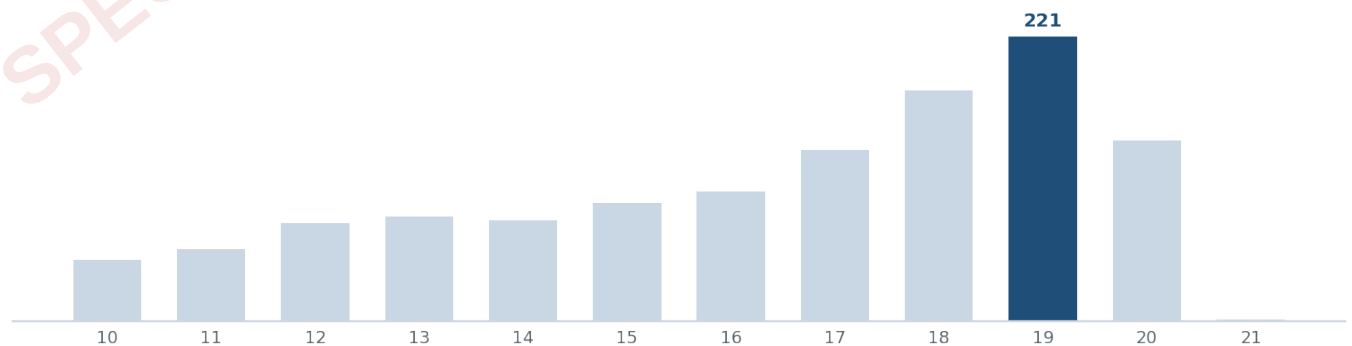

Date	Day	Customers	Reached counter	Busiest hour	Most in store at once
21 Jul	Tuesday	948	269	19:00	47
22 Jul	Wednesday	1,027	289	19:00	49
23 Jul	Thursday	1,103	277	19:00	63
24 Jul	Friday	1,369	377	19:00	76
25 Jul	Saturday	1,663	466	19:00	67
26 Jul	Sunday	1,336	381	19:00	63
27 Jul	Monday	986	279	19:00	52
Period		8,432	2,338		76

The busiest day was Saturday 25 Jul with 1,663 customers, and the quietest was Tuesday 21 Jul with 948. That is a difference of 75%, which is the range the staff roster has to cover.

Customers entering the showroom each day.

Arrivals by hour

Average customers arriving in each hour the showroom is open, across the period.

Section Scores

Where customers went, and whether anybody was there when they arrived

Section	Visits	% of all customers	Typical visit	No staff present	Time before approach
Casual	4,147	48%	3 minutes 30 seconds	3 hours 45 minutes	34 seconds
Ethnic	3,785	45%	4 minutes 24 seconds	4 hours 10 minutes	34 seconds
Trials	2,819	33%	5 minutes 14 seconds	4 hours 30 minutes	33 seconds
Billing	2,274	27%	2 minutes 32 seconds	2 hours	29 seconds
Kids	2,019	24%	3 minutes 14 seconds	3 hours 10 minutes	34 seconds

A customer is counted in every section they stop in, so the third column does not add up to 100%. Minutes with no staff present are counted only against the time a section actually held customers.

Strongest product section this period : Ethnic. A typical visit lasts 4 minutes 24 seconds, longer than any other product section. Time spent at the billing counter or in the trial rooms is waiting rather than interest, so those are not ranked here.

Observation and Recommendation

Section by section · 21 – 27 July 2026

Casual

Observation	
1	No staff member was present in Casual for 3 hours 45 minutes across the period while customers were in the section, which is 5% of the time the section held customers. The longest single stretch was 15 minutes, with up to 29 customers present.
2	Customers waited 34 seconds in Casual before a staff member approached them. A further 0.8% were not approached at all.
3	On 1,574 of the 5,721 occasions a customer entered Casual, they left again without stopping at any display (28%).
4	4,147 visits were recorded to Casual during the period, by 48% of all customers. A typical visit lasted 3 minutes 30 seconds, of which 55 seconds was spent handling products.
Recommendation	
1	Assign a named member of staff to Casual for each shift, and arrange cover before breaks are taken. The Floor Manager should walk the section at least five times a day.
2	The Customer Relationship Executive for this section should greet customers within 30 seconds of them stopping. Record this each period and include it in the floor review.
3	The Visual Merchandiser should review the front display of this section. A section customers enter and leave without stopping points to the display rather than to footfall.
4	Place the most experienced staff in this section during the busiest hours. Customers are already giving it their attention, and that is where a question becomes a sale.

Ethnic

Observation	
1	No staff member was present in Ethnic for 4 hours 10 minutes across the period while customers were in the section, which is 5% of the time the section held customers. The longest single stretch was 25 minutes, with up to 20 customers present.
2	Customers waited 34 seconds in Ethnic before a staff member approached them. A further 0.9% were not approached at all.
3	On 1,567 of the 5,352 occasions a customer entered Ethnic, they left again without stopping at any display (29%).
4	3,785 visits were recorded to Ethnic during the period, by 45% of all customers. A typical visit lasted 4 minutes 24 seconds, of which 1 minute 12 seconds was spent handling products.
Recommendation	
1	Assign a named member of staff to Ethnic for each shift, and arrange cover before breaks are taken. The Floor Manager should walk the section at least five times a day.
2	The Customer Relationship Executive for this section should greet customers within 30 seconds of them stopping. Record this each period and include it in the floor review.
3	The Visual Merchandiser should review the front display of this section. A section customers enter and leave without stopping points to the display rather than to footfall.
4	Place the most experienced staff in this section during the busiest hours. Customers are already giving it their attention, and that is where a question becomes a sale.

Trials

Observation	
1	No staff member was present in Trials for 4 hours 30 minutes across the period while customers were in the section, which is 6% of the time the section held customers. The longest single stretch was 25 minutes, with up to 23 customers present.
2	Customers waited 33 seconds in Trials before a staff member approached them. A further 2.4% were not approached at all.
3	2,819 visits were recorded to Trials during the period, by 33% of all customers. A typical visit lasted 5 minutes 14 seconds.
Recommendation	
1	Assign a named member of staff to Trials for each shift, and arrange cover before breaks are taken. The Floor Manager should walk the section at least five times a day.
2	The Customer Relationship Executive for this section should greet customers within 30 seconds of them stopping. Record this each period and include it in the floor review.
3	Review staffing here against the busiest hours of the day.

Billing

Observation	
1	2,274 visits were recorded to Billing during the period, by 27% of all customers. A typical visit lasted 2 minutes 32 seconds.
Recommendation	
1	Review staffing here against the busiest hours of the day.

Kids

Observation	
1	No staff member was present in Kids for 3 hours 10 minutes across the period while customers were in the section, which is 4% of the time the section held customers. The longest single stretch was 15 minutes, with up to 12 customers present.
2	Customers waited 34 seconds in Kids before a staff member approached them. A further 0.9% were not approached at all.
3	2,019 visits were recorded to Kids during the period, by 24% of all customers. A typical visit lasted 3 minutes 14 seconds, of which 57 seconds was spent handling products.
Recommendation	
1	Assign a named member of staff to Kids for each shift, and arrange cover before breaks are taken. The Floor Manager should walk the section at least five times a day.
2	The Customer Relationship Executive for this section should greet customers within 30 seconds of them stopping. Record this each period and include it in the floor review.
3	Place the most experienced staff in this section during the busiest hours. Customers are already giving it their attention, and that is where a question becomes a sale.

Detailed Inspection Checklist

Every parameter this report measures, with the figure each result was calculated from

Footfall & Trade	Result	Comments
1. How many customers entered the showroom?	8,432	An average of 1,205 customers a day across 7 days. Counted at the entrance, so a customer who steps out and returns is counted twice.
2. Which is the busiest hour of the day?	19:00	1,548 customers arrived in this hour across the period, an average of 221 a day.
3. Which is the quietest hour of the day?	21:00	An average of 1 customers a day. Staff breaks are best taken in this hour.
4. Which is the busiest day?	Saturday	1,663 customers on 25 Jul. The quietest was Tuesday with 948.
5. How many customers were in the showroom at once, at the busiest moment?	76	Recorded at 19:40 on 24 Jul.
6. How many customers reached the billing counter?	2,338	28% of everyone who entered. Reaching the counter is not the same as buying: the system is not connected to the billing software, so purchases are not measured.

Customer Experience	Result	Comments
1. How long does a customer wait at the billing counter?	Need improvement	The typical wait was 2 minutes 42 seconds. One customer in ten waited longer than 3 minutes 25 seconds.
2. How long did the billing queue become?	33 customers	The longest queue of the period, at 19:30 on 25 Jul.
3. Which product section holds customers longest?	Ethnic	A typical visit to this section lasts 4 minutes 24 seconds. This is where experienced staff are worth the most.
4. Which product section do the fewest customers reach?	Kids	24% of customers stopped there during the period. This usually points to where the section sits on the floor rather than to the products in it.

Service & People	Result	Comments
1. Were customers left in a section with no staff member present?	Good	Trials was the weakest section: 4 hours 30 minutes with no staff member present, out of 77 hours 40 minutes that the section held customers.
2. What was the longest single period with no staff member present?	25 minutes	In Trials, with up to 23 customers in the section at the time.
3. Which sections were covered throughout?	Good	Billing. Each was without a staff member for less than 3% of the time it held customers.
4. How long does a customer wait before a staff member approaches?	Need improvement	34 seconds in Kids, the slowest section. Billing was the fastest at 29 seconds. This counts only customers who were approached.
5. How many customers were not approached at all?	Need improvement	2.4% of customers in Trials, the highest of any section. The waiting time above does not include them.
6. Was the floor staffed in line with the number of customers?	Bad	The floor was short of staff for an average of 13 half-hour periods a day. At the worst moment there were 39 customers for each staff member on the floor.

Service & People	Result	Comments
7. Were staff in uniform, well groomed and wearing name badges?	Not assessed	The cameras record people, not job roles. Assessing this needs an inspector.
8. Did staff greet customers on arrival and on departure?	Not assessed	This needs measurement at the entrance, which is not yet built.
9. Did staff show product knowledge and selling skill?	Not assessed	No camera records what was said. Assessing this needs an inspector.
10. Were staff standing together talking rather than serving?	Not assessed	This needs staff to be told apart from customers, which is not yet built.

Floor, Layout & Ambience	Result	Comments
1. Which section do customers walk through without stopping?	Need improvement	Ethnic: 1,567 of 5,352 times a customer entered the section, they left again without stopping at any display. This points to the display rather than to footfall.
2. Was the lighting, music, fragrance and temperature appropriate?	Not assessed	This needs a physical inspection. The cameras do not measure it.
3. Were the floor, racks and rest rooms clean?	Not assessed	This needs a physical inspection. The cameras do not measure it.
4. Were prices and offers clearly displayed on the racks?	Not assessed	This needs a physical inspection. The cameras do not measure it.
5. Were products well displayed, folded and stacked?	Not assessed	This needs a physical inspection. The cameras do not measure it.
6. Were there enough mirrors and trial rooms?	Not assessed	This needs a physical inspection. The cameras do not measure it.
7. Was car parking and customer assistance adequate?	Not assessed	This needs a physical inspection. The cameras do not measure it.
8. Were safety signs, fire exits and CCTV notices in place?	Not assessed	This needs a physical inspection. The cameras do not measure it.

Demand & Merchandising	Result	Comments
1. In which section do customers handle the products most?	Ethnic	Customers spent 1 minute 12 seconds handling products on a typical visit to this section. Handling a product is the earliest sign of interest the cameras can see.
2. And in which section least?	Casual	55 seconds on a typical visit. Worth reviewing the range and the placement before the display.
3. How do customers spend their time in the showroom?	55% browsing	The rest of their time: 17% hold, 10% reach, 9% queue, 9% walk.
4. How much of that time is spent queueing?	Need improvement	9% of all the time customers spend in the showroom. Above one minute in ten, a second billing counter pays for itself.
5. Section performance — Casual	4,147 visits	48% of all customers stopped here. A typical visit lasts 3 minutes 30 seconds. Customers entered and left without stopping 1,574 times, 28% of all entries to the section.
6. Section performance — Ethnic	3,785 visits	45% of all customers stopped here. A typical visit lasts 4 minutes 24 seconds. Customers entered and left without stopping 1,567 times, 29% of all entries to the section.

Madhar Sha Textiles — Showroom

CAM - 20260727

Retail Customer Intelligence Checklist

Unit : Madhar Sha, Chennai

Weekly report :

21 – 27 July 2026

Demand & Merchandising	Result	Comments
7. Section performance — Trials	2,819 visits	33% of all customers stopped here. A typical visit lasts 5 minutes 14 seconds.
8. Section performance — Billing	2,274 visits	27% of all customers stopped here. A typical visit lasts 2 minutes 32 seconds.
9. Section performance — Kids	2,019 visits	24% of all customers stopped here. A typical visit lasts 3 minutes 14 seconds.

Measurement Quality	Result	Comments
1. For how long can the system follow one customer?	10 seconds	Measured across 18 test recordings. No figure in this report needs the system to follow a customer for longer than this.
2. Were any days missing from the period?	Good	All 7 days were recorded.
3. Were any figures published that the measurement cannot support?	Good	No. Every figure in this report is within what the cameras and the tracking delivered.
4. Is any individual identified or recognised between visits?	Good	No. No faces are stored, no individual is identified and nobody is recognised from one visit to the next. This is by design.

Parameters marked "Not assessed" need a physical inspection or a capability that is not yet built. They are never marked down for not having been looked at.

Management Interventions

To improve floor performance and customer experience

Intervention	
1	Set the staff roster against the measured pattern of arrivals rather than by habit. The busiest hour is 19:00, and the floor should be at full strength by half an hour before it.
2	Give every section a named owner for each shift. Trials had the longest periods without a staff member and should be the first to receive one.
3	Place the most experienced staff in Ethnic during the busiest hours. Customers already spend longer there than in any other product section.
4	Ask the Visual Merchandiser to review Kids. Only 24% of customers reach it, which points to where it sits on the floor rather than to the products in it.
5	Open the second billing counter when the queue reaches an agreed length rather than at a fixed time. It reached 33 customers at 19:30 on 25 Jul.
6	Review this report at the start of each period in the floor briefing. Five minutes on the busiest hour and the weakest section is enough.
7	Include the time before approach and the minutes without a staff member in the Floor Manager's review, and assess them at the end of every period rather than at the end of the month.
8	Add the separation of staff from customers to the camera analysis. This is the single change that would allow the report to assess the People section of the CDSC framework instead of leaving it to an inspector.
9	Continue the physical mystery audit alongside this report. The cameras cannot assess product knowledge, grooming, ambience or cleanliness, and should not be asked to.
10	Compare each period against the one before it before making changes. A single period is a reading; three are a trend.

Detailed Scoring Sheet

The CDSC retail framework, April 2018, with the source of every line stated

1. Customer Experience

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Customer Experience	50%	On-Boarding	How well the Customers are Welcomed inside the Showroom	—	Not assessed
		On-Boarding	Did the Welcome Executives properly guided the customers to right floor, by handing over the Floor Maps	—	Not assessed
		Relationship Management	Customer Relationship Executives at every floor should Greet the Customer and take them to right / appropriate counters, Handholding with Counter Staffs in professional manner	2.5%	Measured
		Customer Engagement	The Counter Sales Executives will engage with Customer and identify the need and will start showing right & Appropriate products	5.0%	Measured
		Product Knowledge	Counter Sales Executives should know the product detail and have good knowledge about the section / division	—	Not assessed
		Selling Skills	Both Counter Sales Associates & Customer Relationship Executives helps customer to buy	—	Not assessed
		Selling Skills	after the primary sale is done, the Sales Associates now start selling additional products to increase Average Billing	—	Not assessed
		Process Domain	How efficient the Billing & Delivery - Time to wait in the queue	2.5%	Measured
		Relationship Management	How well the Customers are Greeted while leaving the Showroom / Thank You, Welcome Back Again with Family	—	Not assessed
		Service Quality	How is the Complaint Management Process - is it displayed near the billing counters	—	Not assessed
		Service Quality	Was the Complaint Register / Book kept to lodged the dispute	—	Not assessed

2. Infrastructure

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Infrastructure	10%	Floor Ambience	How is the Floor Ambience - was it properly Lighted / Music at right decibel (75 Decible Max)/ Floors are not slippery /	—	Not assessed
		Cleanliness	How is the cleanliness of the floor / Rest Room / Hygiene / Neat & Tidy of the Racks	—	Not assessed
		Customer Comfort	How does the customer feel comfortable while shopping with Kids & Elderly - was it safe & secure / Chairs for seating /	—	Not assessed

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
		Customer Convenience	Was the Trolley / Kart good enough to carry / Navigate	—	Not assessed

3. Visual Merchandiser

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Visual Merchandiser	30%	Product Display	How well the Products are displayed in the Rails / Racks / Hanger / Sequence	—	Not assessed
		Product Quality	How well the quality of the products	—	Not assessed
		Product Display	How well the Products are displayed Display Box / wore in Mannequin	—	Not assessed
		Pricing Display	How well the Pricing are displayed, was it helpful for the customer ? Or How many instance we need to call Sales Associates for the pricing	—	Not assessed
		Assistive Purchase	How well the Video clips about the Products are relayed, which enable the customer to buy - assistive purchase	—	Not assessed
		Customer Convenience	Sufficient Mirrors to portray the Products for self	—	Not assessed
		Sales Innovation	Was there any Sales Innovation - Demonstration about Premium Products	—	Not assessed
		Sweet Spot / Brain Tattoo	Was there any pleasant memorable experience created for customers ? Like Pongal Festival / Christmas Grandpa	—	Not assessed

4. Training & Development

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Training & Development	10%	Discipline	Was the Staffs looking Good , properly dressed, Groomed, Dressed in uniform , Name Tag,	—	Not assessed
		Communication	Was the staffs has good communication in English apart from Local Language / Body Language	—	Not assessed
		Team Work	How well the Staffs are behaving with them ?? Are they displaying Professional Approach ?	—	Not assessed
		Service Mindset	How well the Staffs behave with Customers ? Are they maintain high level Professional approach ?	—	Not assessed

The Source column is what keeps this from reading as a full audit. Lines marked "Measured" came from the cameras. Lines marked "Not assessed" are waiting for an inspector and carry no score in either direction.

Sign-off

Description of activity	Date	Responsible	Signature	Observation	Status
Input	27 July 2026	Camera analysis (automated)		Figures produced from anonymous video analysis of 7 trading days.	Closed
Review		Floor Manager		The sections named in this report to be walked and confirmed.	Ready To Start
Approver		K U Srinivason		Connecting Dots Strategic Consulting.	Ready To Start

Conclusion

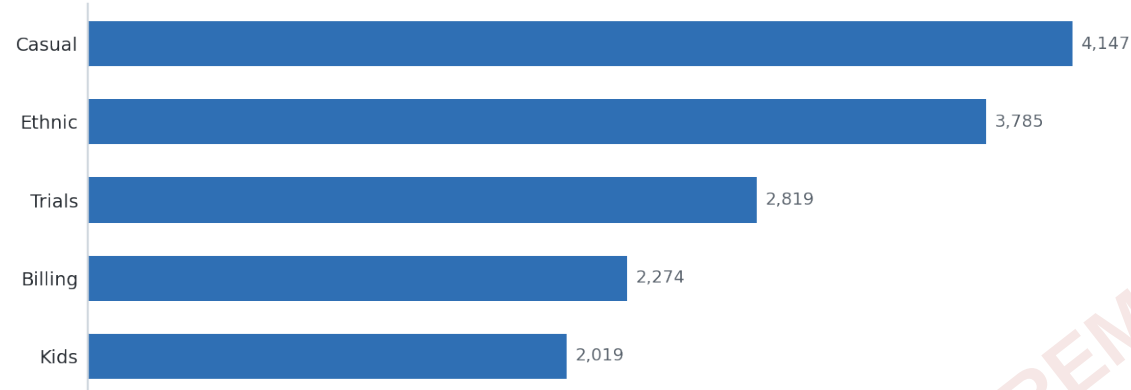

Madhar Sha needs attention on Customer Experience, measured continuously rather than once a month.

All counts come from anonymous video analysis of the trading period named on every page. No faces are stored, no individual is identified and nobody is recognised between visits.

Annexure

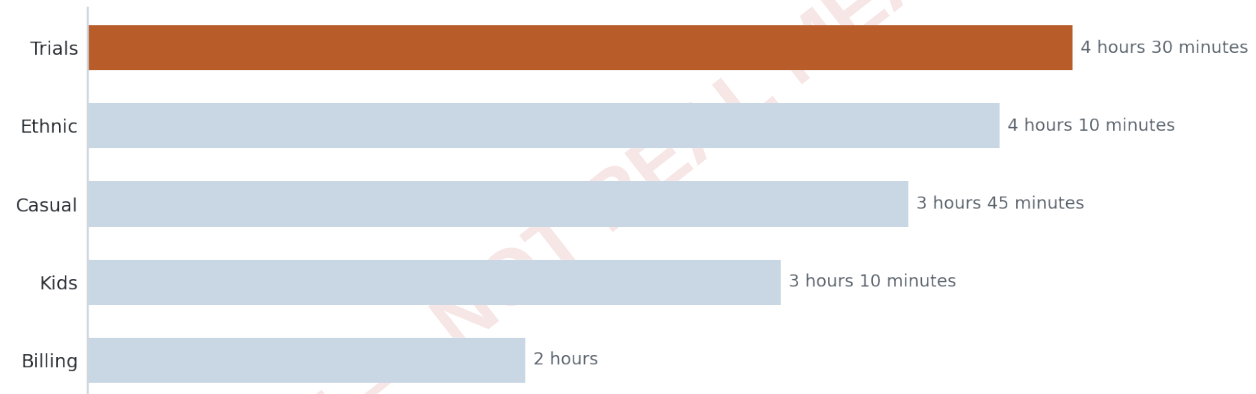

Question · Image · Observation

Where do customers stop?

Visits to each section across the period. A customer who walked through a section without stopping is not counted here.

Were customers served?

Minutes each section held customers with no staff member present. Time when a section was empty is not counted.
