

Observation

Customer Intelligence at Madhar Sha

Chennai

These figures are a demonstration, not measurements of this shop. They come from the pipeline running against a synthetic scaffold while the cameras are being installed. The structure, the wording and the arithmetic are real; the numbers are not.

Date : 29 September 2026

Audit by : Mr. Srinivason U, Principal Consultant — Strategy, Connecting Dots Strategic Consulting.

Method : Continuous anonymous video analysis of the full trading day, reported against the CDSC retail framework.

Report reference : CAM - 20260929

“Customer is the King. To cultivate this Service Culture, we should focus People Development, who will take care of our Customers & enable Profitability”

— K U Srinivason, CDSC

SPECIMEN — NOT REAL MEASUREMENTS

Introduction

Connecting Dots Strategic Consulting

Our mission — to help organizations achieve higher market share, increased revenue and a delightful customer experience, through Customer Service Strategy and Organization Development interventions.

We have helped our clients design Customer Service frameworks, prepare process notes and SOPs, build customer engagement and develop employee skills.

What this report adds

A mystery audit is one visit, by one person, on one day. This report applies the same framework to **every hour the showroom was open**, from the cameras already installed. It does not replace the audit — a camera cannot assess product knowledge, grooming, ambience or cleanliness, and this report never pretends it can. It answers the questions a camera can answer, every day, between visits.

How to read it

Every verdict uses CDSC's vocabulary — **Good, Need improvement, Bad** — and every verdict is printed beside the number it came from, so nothing has to be taken on trust. Anything the cameras cannot see is marked **Not assessed** and carries no score in either direction.

Nothing in this report identifies anybody. No faces are stored, no individual is named, and nobody is recognised between visits.

Outline

The questions this report answers

“When do the customers actually come?”

Footfall is counted at the door, hour by hour. The busiest hour today was 19:00 with 188 arrivals.

“Where do they go, and where do they stop?”

Every section is measured for trips in, stops, pass-throughs and typical stop length — so a quiet section can be told apart from a badly placed one.

“Were they served?”

Time before a staff member reaches a customer, and time a section spent with shoppers in it and nobody serving them.

“What should the floor do differently tomorrow?”

Every observation in this report is paired with a recommendation and a named owner — Floor Manager, Visual Merchandiser, HR.

Madhar Sha Textiles — Showroom · 29 September 2026

Employee is the Key to unlock Customer Experience

Date : 29 September 2026

Audit by : Mr. Srinivason U, Principal Consultant — Strategy, Connecting Dots Strategic Consulting.

SPECIMEN — NOT REAL MEASUREMENTS

Core

Target against achievement, by domain

Domain	Weight (Target)	Assessed	Achievement	Remaining
Customer Experience	50%	3 of 11 items	50%	8 items need an inspector
Infrastructure	10%	0 of 4 items	—	4 items need an inspector
Visual Merchandiser	30%	0 of 8 items	—	8 items need an inspector
Training & Development	10%	0 of 4 items	—	4 items need an inspector

50%

is the score across the **15% of the framework this report assessed today**. It is not a CDSC mystery audit score and must not be compared with one. At most 22% of the framework can ever be measured by camera; the remaining 78% — product display, pricing, ambience, cleanliness, selling skills, product knowledge — needs a person on the floor.

What the camera adds that a visit cannot

The inverse is worth stating plainly. Footfall by hour, peak occupancy, section-by-section stop rates, unattended minutes and queue build-up score **nothing** in the framework above — because a single visit cannot measure them. They are the strongest numbers in this report and they are entirely additional to the audit.

Concern on Domain

29 September 2026

Domain	Concern
Service Coverage	Kids ran 40 min with customers in it and nobody serving them.
Welcome & Greeting	A customer waits 37 sec in Ethnic before anyone reaches them.
Staffing to Demand	9 half-hour slots ran short-handed against the footfall curve.
Layout & Placement	Kids is reached by only 27% of customers.
Billing Process	The billing queue reached 19 customers at 19:15.

Section Scores

Where the customers went, and whether anybody was there when they did

Section	Stopped	% of all customers	Typical stop	Unattended	Time to first contact
Casual	477	48%	3.6 min	30 min	32 sec
Ethnic	455	46%	4.4 min	35 min	37 sec
Trials	340	34%	5.3 min	35 min	34 sec
Billing	269	27%	2.5 min	15 min	28 sec
Kids	264	27%	3.3 min	40 min	35 sec

A customer is counted in every section they stopped in, so the % of all customers column does not add up to 100%.

Best section for 29 September 2026 : Ethnic — customers give it a typical 4.4 minutes, the longest of any product section. Time spent in billing or the trial rooms is waiting, so those are not counted here.

Casual

Observation and recommendation · 29 September 2026

Observation

- 1 Shoppers stood in Casual with no staff member nearby for 30 min of the 11.1 hrs the section had customers in it — 5% of its busy time. The longest single stretch ran 10 min, with up to 9 shoppers present.
- 2 A customer waits a typical 32 sec in Casual before anybody reaches them, and the slowest quarter waits 49 sec. 4 customers were never approached at all.
- 3 193 of 670 trips into Casual (29%) end with the customer walking straight out again without stopping at anything.
- 4 477 customers stopped in Casual (48% of all customers), for a typical 3.6 min each, with 55 sec of hands-on handling per stop.

Recommendation

- 1 Floor Manager should set a named owner for Casual on every shift, and cover the section before breaks are taken rather than after. At least five floor rounds a day.
- 2 Customer Relationship Executive on this section should greet within 30 seconds of a customer stopping. Track it weekly and include it in the floor KPI.
- 3 Visual Merchandiser should review the front rack of this section. A section people enter and leave without stopping is a display problem, not a footfall problem.
- 4 Keep your most product-knowledgeable staff on this section during the peak hour — attention is already here, and this is where a question turns into a sale.

Ethnic

Observation and recommendation · 29 September 2026

Observation

- 1 Shoppers stood in Ethnic with no staff member nearby for 35 min of the 11.4 hrs the section had customers in it — 5% of its busy time. The longest single stretch ran 25 min, with up to 13 shoppers present.
- 2 A customer waits a typical 37 sec in Ethnic before anybody reaches them, and the slowest quarter waits 53 sec. 2 customers were never approached at all.
- 3 182 of 637 trips into Ethnic (29%) end with the customer walking straight out again without stopping at anything.
- 4 455 customers stopped in Ethnic (46% of all customers), for a typical 4.4 min each, with 1 min 14 sec of hands-on handling per stop.

Recommendation

- 1 Floor Manager should set a named owner for Ethnic on every shift, and cover the section before breaks are taken rather than after. At least five floor rounds a day.
- 2 Customer Relationship Executive on this section should greet within 30 seconds of a customer stopping. Track it weekly and include it in the floor KPI.
- 3 Visual Merchandiser should review the front rack of this section. A section people enter and leave without stopping is a display problem, not a footfall problem.
- 4 Keep your most product-knowledgeable staff on this section during the peak hour — attention is already here, and this is where a question turns into a sale.

Trials

Observation and recommendation · 29 September 2026

Observation

- 1 Shoppers stood in Trials with no staff member nearby for 35 min of the 11.2 hrs the section had customers in it — 5% of its busy time. The longest single stretch ran 25 min, with up to 14 shoppers present.
- 2 A customer waits a typical 34 sec in Trials before anybody reaches them, and the slowest quarter waits 51 sec. 6 customers were never approached at all.

Recommendation

- 1 Floor Manager should set a named owner for Trials on every shift, and cover the section before breaks are taken rather than after. At least five floor rounds a day.
- 2 Customer Relationship Executive on this section should greet within 30 seconds of a customer stopping. Track it weekly and include it in the floor KPI.

Billing

Observation and recommendation · 29 September 2026

Observation

- 1 Shoppers stood in Billing with no staff member nearby for 15 min of the 10.5 hrs the section had customers in it — 2% of its busy time. The longest single stretch ran 15 min, with up to 4 shoppers present.

Recommendation

- 1 Floor Manager should set a named owner for Billing on every shift, and cover the section before breaks are taken rather than after. At least five floor rounds a day.

Kids

Observation and recommendation · 29 September 2026

Observation

- 1 Shoppers stood in Kids with no staff member nearby for 40 min of the 10.3 hrs the section had customers in it — 6% of its busy time. The longest single stretch ran 10 min, with up to 5 shoppers present.
- 2 A customer waits a typical 35 sec in Kids before anybody reaches them, and the slowest quarter waits 52 sec. 2 customers were never approached at all.
- 3 264 customers stopped in Kids (27% of all customers), for a typical 3.3 min each, with 59 sec of hands-on handling per stop.

Recommendation

- 1 Floor Manager should set a named owner for Kids on every shift, and cover the section before breaks are taken rather than after. At least five floor rounds a day.
- 2 Customer Relationship Executive on this section should greet within 30 seconds of a customer stopping. Track it weekly and include it in the floor KPI.
- 3 Keep your most product-knowledgeable staff on this section during the peak hour — attention is already here, and this is where a question turns into a sale.

Detailed Inspection Checklist

Every parameter this report measures, with the figure each verdict was derived from.

SPECIMEN — NOT REAL MEASUREMENTS

Madhar Sha Textiles — Showroom

CAM - 20260929

Retail Customer Intelligence Checklist

Unit : Madhar Sha, Chennai

Report Requested on :

29/09/2026

Footfall & Trade	Result	Comments
1. How many customers entered the showroom?	986	Counted as directional crossings of the entrance line, not by tracking individuals through the shop.
2. When was the peak trading hour?	19:00	188 customers arrived in this hour alone.
3. When was the quietest trading hour?	10:00	43 customers. Staff breaks belong here.
4. How uneven is the trading day?	Bad	Peak hour is 4.4× the quietest. A flat roster across an uneven day loses at both ends.
5. How crowded did the floor get?	52 at once	Fullest at 18:40. Aisles should be walked clear before this hour, not during it.
6. How many customers reached the billing counter?	279	28% of everyone who walked in. Reaching the counter is not buying — there is no billing integration in Phase 1, so a sale is not observable.
7. Floor footfall — Ground Floor	434	44% of the day's customers.
8. Floor footfall — First Floor	335	34% of the day's customers.
9. Floor footfall — Second Floor	217	22% of the day's customers.

Customer Experience	Result	Comments
1. How efficient was billing — time spent waiting at the counter?	Need improvement	Longest typical wait 2 min 50 sec, around 18:00.
2. When was the counter under the most pressure?	18:00	51 customers through it in that hour.
3. How long did the billing queue get?	Bad	19 customers waiting at once, around 19:15.
4. Which product section holds customers longest?	Ethnic	Typical stop 4.4 min. This is where your most knowledgeable staff earn their keep.
5. What is a typical stop in a section?	3.8 min	Median across every section that had stops today.
6. Which section do fewest customers reach?	Kids	Only 27% of customers get to it. Usually a placement problem before it is a product one.

Service & People	Result	Comments
1. Were customers left with nobody serving them?	Good	Kids worst: 40 min unattended out of the 10.3 hrs that section had shoppers in it.
2. What was the longest single unattended stretch?	10 min	In Kids, with up to 5 shoppers present at the time.
3. Which sections were covered all day?	Good	Billing.
4. How long before a staff member reached a customer?	Need improvement	Slowest in Ethnic at 37 sec median; fastest in Billing at 28 sec. Counts only customers who were reached at all.
5. Were any customers never reached at all?	Good	Worst in Trials: 1.8% were never approached. The wait above therefore flatters it.
6. Was the floor adequately staffed through the day?	Bad	9 of 23 half-hour slots short-handed. Worst at 19:00: 16.0 shoppers per staff member.
7. Were staff in uniform, groomed and wearing name badges?	Not assessed	Requires uniform detection or a shift roster. A camera sees people, not job titles.

Service & People	Result	Comments
8. Did staff greet customers on arrival and on departure?	Not assessed	Requires entrance-response measurement, which is not built.
9. Did staff display product knowledge and selling skills?	Not assessed	Requires an inspector. No camera measures what was said.
10. Were staff clustered and chatting rather than serving?	Not assessed	Requires staff clustering detection, which is not built.

Floor, Layout & Ambience	Result	Comments
1. Where do customers get stuck rather than browse?	Ethnic	Congestion score 0.81 — 203 people at low walking speed in the same place.
2. Where do customers stand most?	13.5 m × 4.0 m	Busiest 0.25 m square on the floor, measured from the entrance corner.
3. Which section is walked through without stopping?	Need improvement	Casual: 193 of 670 trips end without a stop. A display problem, not a footfall one.
4. Floor ambience — lighting, music, fragrance, temperature	Not assessed	Requires a physical inspection — no camera measurement exists for this.
5. Cleanliness of floor, racks and rest rooms	Not assessed	Requires a physical inspection — no camera measurement exists for this.
6. Pricing and offers clearly displayed on racks	Not assessed	Requires a physical inspection — no camera measurement exists for this.
7. Product display, folding and stacking	Not assessed	Requires a physical inspection — no camera measurement exists for this.
8. Sufficient mirrors and trial room facilities	Not assessed	Requires a physical inspection — no camera measurement exists for this.
9. Car parking and customer amenities	Not assessed	Requires a physical inspection — no camera measurement exists for this.
10. Safety signage, fire exits and CCTV notices	Not assessed	Requires a physical inspection — no camera measurement exists for this.

Demand & Merchandising	Result	Comments
1. Which section generates the most hands-on interest?	Ethnic	1 min 14 sec of handling per customer who stopped — the earliest visible sign of wanting something.
2. Which section generates the least?	Casual	55 sec per customer. Look at the mix and the placement before blaming the display.
3. How is customer floor time spent?	55% browsing	Share of all in-store time spent browsing rather than walking between sections or queueing.
4. How much floor time is spent queueing?	Need improvement	9% of customer time. Past one minute in ten, a second till pays for itself.
5. Section performance — Casual	477 stopped	48% of all customers · typical stop 3.6 min · walked past 193 times.
6. Section performance — Ethnic	455 stopped	46% of all customers · typical stop 4.4 min · walked past 182 times.
7. Section performance — Trials	340 stopped	34% of all customers · typical stop 5.3 min · walked past 0 times.

Madhar Sha Textiles — Showroom

CAM - 20260929

Retail Customer Intelligence Checklist

Unit : Madhar Sha, Chennai

Report Requested on :

29/09/2026

Demand & Merchandising	Result	Comments
8. Section performance — Billing	269 stopped	27% of all customers · typical stop 2.5 min · walked past 11 times.
9. Section performance — Kids	264 stopped	27% of all customers · typical stop 3.3 min · walked past 2 times.

Measurement Quality	Result	Comments
1. How long does the camera hold one customer?	Need improvement	Median 9.65 sec across 18 probed clips. Any figure needing longer than this is not reported at all.
2. How often is one customer counted as two?	Need improvement	2.0× fragmentation. Perfect tracking is 1.0. This is why footfall is counted at the door rather than by counting tracks.
3. Were any figures published beyond what the tracking supports?	Good	None — every figure in this report is within what the tracking delivered.
4. Are individuals identified or recognised between visits?	Good	No. No faces are stored, no individual is identified, and nobody is recognised across visits. Removed by design, not omission.

Parameters marked "Not assessed" require a physical inspection or a capability not yet built. They are never scored low on the basis of not having been looked at.

Management Interventions

To increase employee productivity and floor performance

Intervention	
1	Roster against the footfall curve, not against habit. The peak hour is 19:00 with 188 arrivals; the floor should be at full strength thirty minutes before it.
2	Assign a named section owner per shift. Kids carried the largest unattended stretch today and should be the first section to get one.
3	Place your most product-knowledgeable staff on Trials during peak hours — customers already give it 5.3 minutes of attention.
4	Visual Merchandiser to review Kids: reached by 27% of customers, which is a placement question before it is a product question.
5	Open the second billing counter on the queue trigger rather than on the clock — the dashboard shows the queue building before the counter feels it.
6	Integrate this report into the morning floor briefing. Five minutes on yesterday's peak hour and yesterday's unattended section.
7	Include response time and section coverage in the Floor Manager KPI, and review them weekly rather than at the month end.
8	Add staff/customer separation to the camera analytics. It is the single change that would let this report score CDSC's People items instead of leaving them to an inspector.
9	Retain a monthly physical mystery audit alongside the daily camera report. The camera cannot assess product knowledge, grooming, ambience or cleanliness, and should not be asked to.
10	Review the section scores against last week before changing anything. One day is a reading; a week is a trend.

Detailed Scoring Sheet

The CDSC retail framework, April 2018, with the source of every line stated.

SPECIMEN — NOT REAL MEASUREMENTS

1. Customer Experience

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Customer Experience	50%	On-Boarding	How well the Customers are Welcomed inside the Showroom	—	Not assessed
		On-Boarding	Did the Welcome Executives properly guided the customers to right floor, by handing over the Floor Maps	—	Not assessed
		Relationship Management	Customer Relationship Executives at every floor should Greet the Customer and take them to right / appropriate counters, Handholding with Counter Staffs in professional manner	2.5%	Measured
		Customer Engagement	The Counter Sales Executives will engage with Customer and identify the need and will start showing right & Appropriate products	5.0%	Measured
		Product Knowledge	Counter Sales Executives should know the product detail and have good knowledge about the section / division	—	Not assessed
		Selling Skills	Both Counter Sales Associates & Customer Relationship Executives helps customer to buy	—	Not assessed
		Selling Skills	after the primary sale is done, the Sales Associates now start selling additional products to increase Average Billing	—	Not assessed
		Process Domain	How efficient the Billing & Delivery - Time to wait in the queue	0.0%	Measured
		Relationship Management	How well the Customers are Greeted while leaving the Showroom / Thank You, Welcome Back Again with Family	—	Not assessed
		Service Quality	How is the Complaint Management Process - is it displayed near the billing counters	—	Not assessed
		Service Quality	Was the Complaint Register / Book kept to lodged the dispute	—	Not assessed

2. Infrastructure

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Infrastructure	10%	Floor Ambience	How is the Floor Ambience - was it properly Lighted / Music at right decibel (75 Decible Max)/ Floors are not slippery /	—	Not assessed
		Cleanliness	How is the cleanliness of the floor / Rest Room / Hygiene / Neat & Tidy of the Racks	—	Not assessed
		Customer Comfort	How does the customer feel comfortable while shopping with Kids & Elderly - was it safe & secure / Chairs for seating /	—	Not assessed
		Customer Convenience	Was the Trolley / Kart good enough to carry / Navigate	—	Not assessed

3. Visual Merchandiser

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Visual Merchandiser	30%	Product Display	How well the Products are displayed in the Rails / Racks / Hanger / Sequence	—	Not assessed
		Product Quality	How well the quality of the products	—	Not assessed
		Product Display	How well the Products are displayed Display Box / wore in Mannequin	—	Not assessed
		Pricing Display	How well the Pricing are displayed, was it helpful for the customer ? Or How many instance we need to call Sales Associates for the pricing	—	Not assessed
		Assistive Purchase	How well the Video clips about the Products are relayed, which enable the customer to buy - assistive purchase	—	Not assessed
		Customer Convenience	Sufficient Mirrors to portray the Products for self	—	Not assessed
		Sales Innovation	Was there any Sales Innovation - Demonstration about Premium Products	—	Not assessed
		Sweet Spot / Brain Tattoo	Was there any pleasant memorable experience created for customers ? Like Pongal Festival / Christmas Grandpa	—	Not assessed

4. Training & Development

Domain	W %	Sub Domain	Sub-Sub-Domain	Ac %	Source
Training & Development	10%	Discipline	Was the Staffs looking Good , properly dressed, Groomed, Dressed in uniform , Name Tag,	—	Not assessed
		Communication	Was the staffs has good communication in English apart from Local Language / Body Language	—	Not assessed
		Team Work	How well the Staffs are behaving with them ?? Are they displaying Professional Approach ?	—	Not assessed
		Service Mindset	How well the Staffs behave with Customers ? Are they maintain high level Professional approach ?	—	Not assessed

The **Source** column is what stops this reading as a full audit. "Measured" lines came from the cameras; "Not assessed" lines are waiting for an inspector, and carry no score in either direction.

Annexure

Checklist question · Image · Observation

When do the customers actually come?

Arrivals per opening hour, counted at the entrance line. Peak 19:00 with 188 arrivals.

Where do they stop?

Customers who stopped in each section. A trip through a section without a stop is not counted here.

Were they served?

Minutes each section spent with shoppers in it and no staff member nearby, measured only against the time that section had customers.
